Category:Indian magazine titles Category:Magazines with year of establishment missing Category:Marathi-language magazines Category:Monthly magazines Category:Media in Marathi mediaQ: Soap response message to some complex type? I have a WSDL file, and am calling a web service that I've written in C#. After I get the response, I want to save it to a file. The response looks like this: 001 01 00000000 00000000 As you can see, the response is wrapped in a namespace, but it's not clear to me how to get to the Name attribute of the ProcessGroupResponse element. I read the rest of the elements with the XDocument.Load() method, but I can't find a way to get to the attribute. I can find it by string searching, but it would be nice to find out how f678ea9f9e
